***Election/Restrictions***

Group I. Claims 1-5,9-11 are, drawn to "adjusting a phase relationship between the clock signal and image display data", classified in class 345, subclass 99.

Group II. Claims 6-8 are, drawn to "selecting from a plurality of tone-level nodes", classified in class 345, subclass 89.

Group III. Claims 12-17 are, drawn to "image display data driving", classified in class 345, subclass 100.

The inventions are distinct, each from the other because of the following reasons:

1. Inventions group I and II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I have a separate utility such as "adjusting a phase relationship between the clock signal and image data according to the detected change pattern". The subcombination has separate utility such as "a selecting part selecting from the plurality of tone level nodes to which the reference voltages are supplied"

2. Inventions group I and II are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for

patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I have a separate utility such as "adjusting a phase relationship between the clock signal and image data according to the detected change pattern". The subcombination has separate utility such as "a data driving part causing a liquid crystal display part to display an image according to image display data by a given control".

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amare Mengistu whose telephone number is (703) 305-4880. The examiner can normally be reached on M-F, T-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bipin Shalwala can be reached on (703) 305-4938. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
